**LOT #2 – night vision device**

### **B. Background**

The modernization of Police capabilities to maintain public order and combat cybercrime entails systemic interventions across the central and local levels. Thus, targeted assistance will be provided through the **Support Police Capacity Building in the Field of Public Order and Cybercrime in Moldova Project** to support the national stakeholders in expanding the mobility, outreach, protection, monitoring/surveillance, investigative and computing capabilities of the institution along these two strategic directions of Police activity. This intervention is aligned to national priorities as described in the Home Affairs Development Strategy and the thematic programmes on Public Order and Security and Preventing and Combating Crime. The Project will engage in the practical implementation of priorities defined in the national policy documents. Therefore, the Project will strengthen institutional capacities, build knowledge, and deliver modern tools and equipment to enable an environment for nurturing next-generation police operations, supported by skills, knowledge and tools compliant with the demand for modern-style policing.

The procurement of hand-held metal detectors, thermal imaging binoculars, and night vision devices is a component of UNDP-INL initiative to modernize police capabilities in maintaining public order and combating cybercrime. These tools are essential for enhancing the mobility, surveillance, protection, and investigative capabilities of police forces.
