## TERMS OF REFERENCE

**Title:** Provision of Advanced Professional Training Programme on Hydrological and Hydraulic Modelling, Flood Risk Analysis and GIS Applications

**Project:** Supporting the Moldovan Authorities in the Sustainable Management of the Nistru River (Nistru II Project)

### 1. BACKGROUND

The sustainable management of water resources represents a strategic priority for the Republic of Moldova, particularly in the context of its commitments under the EU–Moldova Association Agreement and its status as an EU candidate country. Alignment with the European Union water acquis, including the Water Framework Directive and the Floods Directive, requires strengthened institutional capacities, modern analytical tools and improved technical competencies within national water management authorities.

The Nistru River basin constitutes the country’s primary water source, supplying up to 70 percent of Moldova’s water demand for drinking water supply, agriculture, industry and ecosystem services. Increasing pressures related to climate variability, hydrological extremes, land-use changes and water use demands highlight the need for evidence-based planning and adaptive water resources management approaches supported by reliable hydrological and hydraulic analysis, flood risk assessment and spatial data interpretation.

The Nistru II Project is implemented by United Nations Development Programme Moldova with financial support from Sweden, in partnership with the Ministry of Environment and its subordinate institution, the National Administration “Apele Moldovei”. Under its institutional capacity development component, the project supports strengthening the technical and operational capacities of national authorities responsible for the implementation of integrated water resources management and river basin planning principles.

In particular, the project contributes to improving the ability of the National Administration “Apele Moldovei” to apply modern analytical approaches required for:

- hydrological and hydraulic modelling;
- flood hazard and flood risk assessment;
- hydrological analysis and forecasting;
- preparation and implementation of River Basin Management Plans;
- assessment of climate-related hydrological impacts;
- operational support for water resources management and flood risk management decisions.

Despite ongoing reforms, institutional practice remains constrained by limited applied experience in advanced modelling approaches, flood simulation and GIS-integrated analytical applications. Key capacity gaps include:

- insufficient practical application of hydrological and hydraulic modelling tools;
- limited operational experience in flood modelling and flood risk assessment;

- challenges in integrating hydrological, climatic, land-use and environmental datasets into modelling workflows;
- limited practical application of GIS-based analytical approaches for water resources and flood risk management;
- insufficient exposure to modern modelling methodologies and applied technical practices.

These constraints reduce the ability of specialists to translate monitoring and spatial data into operational planning decisions and to effectively implement EU-aligned water management and flood risk management approaches.

To address these challenges, the Nistru II Project foresees the delivery of an advanced professional training programme targeting technical specialists of the National Administration “Apele Moldovei”.

The training programme will strengthen applied competencies through structured practical training modules focusing on:

- hydrological modelling;
- hydraulic and flood modelling;
- integration of environmental and climatic components into modelling workflows;
- GIS-based flood risk assessment and spatial analysis;
- application of modelling results for water resources and flood risk management decision-making.

Given the highly specialized and advanced technical nature of the assignment, as well as the limited availability of advanced practical expertise in hydrological and hydraulic modelling and flood risk assessment within the Republic of Moldova, the Nistru II Project intends to contract an international specialized service provider with demonstrated practical experience in applied modelling, operational analytical workflows and flood risk analysis within international professional practice.

The training programme shall emphasize practical, application-oriented learning aimed at strengthening day-to-day operational capacities of specialists involved in hydrological analysis, modelling and flood risk assessment, rather than purely theoretical knowledge transfer.

Particular emphasis shall be placed on hands-on practical exercises, operational workflows, real-case analytical applications and direct exposure of participants to technical infrastructure and implementation environments currently applied in international professional practice.

Therefore, the Nistru II Project seeks to contract a specialized international service provider to design and deliver an advanced professional training programme addressing the identified institutional capacity gaps.

## **2. OBJECTIVE OF THE ASSIGNMENT**

The objective of the assignment is to design and deliver an advanced professional training programme aimed at strengthening the practical technical and analytical capacities of specialists from the National Administration “Apele Moldovei” and other relevant stakeholders in:

- hydrological and hydraulic modelling;
- flood simulation and flood risk assessment;

- application of Geographic Information Systems (GIS) for hydrological, hydraulic and environmental analysis;
- integration of climatic, hydrological, land-use and environmental datasets into analytical and modelling workflows;
- interpretation and application of modelling results for water resources and flood risk management decision-making.

The training programme is expected to strengthen participants' ability to process, analyse and interpret hydrological, hydraulic and spatial datasets, develop and apply modelling approaches, and utilize analytical outputs to support evidence-based planning and operational decision-making related to water resources management, climate adaptation and flood risk management.

The assignment shall emphasize advanced practical and application-oriented learning focused on strengthening day-to-day operational capacities through hands-on exercises, modelling workflows, case studies and GIS-integrated analytical applications aligned with modern international practices and methodologies.

### **3. SCOPE OF WORK**
