

[illegible][illegible][illegible]

## GENERAL INSTRUCTIONS

- The mappings are indicative of the main decay phenomena present on the surfaces. These surfaces indicate a realistic percentage of the area to be treated. The **price of the restoration works is however fixed at a flat rate**. After the installation of the soffits and before starting the restoration works, the contractor must carry out a survey of all the surfaces to verify and update the mappings.
- All the processes, at the materials and at the works must be tested on site**, before being used, and identified for approval by the project manager and UHSP site manager.
- It is strictly forbidden to use cementitious materials or materials based on cement or ash with traces of cement.
- The contractor must update the BIM model with all the data relating to the state of conservation and the work carried out, in order to deliver to the contracting authority an "as built" Free-Form.
